

The interview star

The Olympus DS-2200 is a top-level digital stereo recorder designed to meet the needs of professionals. It offers first-class recording in four different quality modes. It is equipped with a 128 MB removable xD-Picture Card, a stereo microphone, USB docking station and DSS Player Pro Software making it the perfect working tool for managers and journalists.

Let's talk!

The DS-2200 provides:

- Over 4 hours SHQ stereo recording capacity with included microphone ME51S
- 4 recording qualities (Stereo High Quality/ High Quality in WMA format and Standard Play/Long Play in DSS format)
- A maximum recording time of 44 hours and 45 minutes in LP mode
- Easy PC connectivity with USB docking station
- Clip-microphone with remote control function

The plug-in ME51S stereo microphone enables the user to make professional recordings in interviews, for example.

Time to remember

Besides recording interviews, meetings and conferences, one of the most important features in digital voice recording is storage capacity. The DS-2200 is the professional-level stereo recorder thanks to its removable xD-Picture Card for practically unlimited recording time.

Conferencing and interviewing

Two AKG microphones each with a 2,5 m cable are the ideal solution for recording a conference and allows stereo recordings in larger conference rooms. This is ensured by two high quality electric condenser microphones which capture every sound and statement in the room thanks to their omnidirectional directivity. Naturally, the frequency response of the DS-2200 and the microphones (up to 8,000 Hz) is perfectly attuned, guaranteeing excellent playback quality.

Conferencing

Interviewing

The Digital Conference Kit suits perfectly for professional recording at larger gatherings. It is easy to take with you wherever you go and the set up is done within a few seconds.
